

Teflon™ FEP

Fluoropolymer Film

Properties Bulletin

Description

Teflon™ FEP film is a transparent, thermoplastic film that can be heat sealed, thermoformed, vacuum formed, heat bonded, welded, metalized, and laminated to many other materials, as well as used as an excellent hot-melt adhesive.

This wide variety of fabrication possibilities combines with the following important properties to offer a unique balance of capabilities not available in any other plastic film.

Chemical Compatibility

- Teflon™ FEP film is chemically inert and resistant to virtually all chemicals, except molten alkali metals, gaseous fluorine, and certain complex halogenated compounds, such as chlorine trifluoride, at elevated temperatures and pressures.
- Low permeability to liquids, gases, moisture, and organic vapors

Electrical Reliability

- Superior reliability and retention of properties over large areas of film
- High dielectric strength, over 6,500 V/mil for 1-mil film (260 kV/mm for 0.025-mm film)
- No electrical tracking, non-wetting, and/or non-charring
- Very low power factor and dielectric constant, only slight change over wide ranges of temperature and frequency

Wide Thermal Range

- Continuous service temperature: -240 to 205 °C (-400 to 400 °F)
- Melting range: 250 to 280 °C (500 to 540 °F)
- Heat sealable

Mechanical Toughness

- Superior anti-stick and low frictional properties
- High resistance to impact and tearing
- Useful physical properties at cryogenic temperatures

Long Time Weatherability*

- Inert to outdoor exposure; no measurable change after 20 years in Florida
- High transmittance of ultraviolet and all, but far, infrared radiation

Reliability

- Teflon™ FEP film contains no plasticizers or other foreign materials.
- Conventional equipment and techniques can be used for processing; basic composition and properties will not be influenced.
- Rigid quality control by Chemours ensures uniform gauge, void-free film.

Teflon™ FEP Film

The convenience of Teflon™ FEP fluoropolymer in easy-to-use film facilitates the design and fabrication of this low-friction thermoplastic for all sorts of high-performance jobs. It is transparent and can be heat sealed, thermoformed, welded, and heat bonded.

Superior anti-stick properties make it an ideal release film for many applications. A cementable type with an invisible surface treatment is available for bonding to one or both sides with adhesives. This versatility is augmented by the superior properties of a true melt-processible fluoropolymer and the wide choice of product dimensions available from Chemours.

*Type C film is not recommended for outdoor use.

Film Conversion Solutions To Meet All Your Needs

PolymerFilms strives to exceed our customers' expectations, accurately converting a wide range of products in a timely and cost effective manner. Our conversion facilities provide more than 350 pre-converted standard sheets and rolls in stock, and sheets ready for same day shipping. Additionally, many other products in our portfolio can be custom fabricated and converted within days to meet your exact requirements.

We specialize in serving a variety of customers, from expansive to boutique- all benefiting from our expertise and product offerings. Collaborating with the PolymerFilms team increases our customers' ability to be competitive in the marketplace.
